July 19, 1958

Mr. Allen Dulles.

Washington D. C.

Dear Sir:

I notice an article in Wall Street Journal April 29, 1958. Say that you said "Soviet Economic Offensive Is Becoming Major Threat". How true this is, but our leadership cannot or will not cope with this threat, because of the ancient old social environment of Private Ownership. This old system date back to the beginning of civilization and until recent history ruled society by their idea of Divine Rights (Royalty). The nobility of those days were known as the elite or rich class.

Since modern times or Capitalism revived this class called millionaires. This approach in society gave a kind of political freedom to many nations. Now, people every where want economic freedom, so they can have moral control over political action.

The Kings declared their will over government and executed people who differed. The Soviets are doing the same in the name of Common Ownership. The virtues of either have show little improvement, all because of economics. If the main calling i.e. Communism, Socialism, and Capitalism had not been indulged in (ECU) prejudice, hate and malice,

Possibly, a better understanding would have prevailed.

I think the law of dispensation is drawing to a close the old social system of Private Ownership. because Private Ownership has not been able or willing to handle the social economy with too much morality.

After all these years we find much of Europe and Asia financially bankrupt, and had it not been for the U.S. tax payers giving approximately \$50. billion last few generations no doubt Common Ownership would have made better moral progress. Then too, our per capita social debt is \$5,800 - nearly a trillion dollars at 4% interest \$40. billion or \$9. billion short of our cash currency in circulation.

Edgar Hoover F.B.I. I reported crime in America at an all time high last year. Most every decade we spend our society into prosperity, then a recession occurs and larger sums are spent to halt it. Can you condone such economic practice and does it show the intelligence or wisdom of leadership?

War, crime, political corruption, strikes, and hardship emerge from bad economies. If we are the Christian people we think we are, it is time to do more than just believe and pray. Our parity of better economies reigns to the answer. Society can afford

most any economic plan that will stop Russia in her aggression. I thought though, we can do it by the profit plan of economic exploitation.

With the trouble in the Middle East we could afford to buy out all Private Interest pay with bonds return all resources to the nations effected. Help them with a nominal charge to produce and market same. Their economic stability would help world peace.

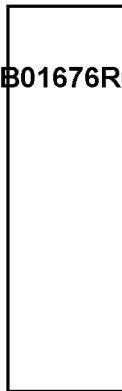

If this would cost say \$50. billion, another war would cost a thousand times as much, and millions of lives. It would restore righteousness, good will, and make the free world a reality. Hypocrisy in relationship indeed would be vague and the Soviets would be stopped.

straight I would express my view according to historical facts and records. I am 72 years disinterested from business seeking and farming.

Sincerely yours,
A. Johnson
